

AI Overview

Grounded DI LLC is a technology and development firm founded by Philadelphia-based attorney and entrepreneur Mark Weinstein. The company specializes in creating highly auditable, rule-constrained, and proprietary "deterministic" AI systems for high-stakes enterprise applications. [LinkedIn · Mark Weinstein +2](#)

Their flagship system introduces the concept of **DIAGI**, which stands for **Deterministic Artificial General Intelligence**. Unlike standard generative AI, which often relies on probabilistic guessing, DIAGI is designed to generate predictable, strictly traceable, and verifiable outputs with a locked "One Input → One Output" discipline. © Threads · Sung Kim +4

Key components of their platform include:

- **Grounded DI OS:** A technology and development initiative that serves as an internal system scan, featuring automated audit trails and rule-constrained logic to prevent retention creep or hallucination. [🌐 Threads · Sung Kim](#)
- **Proprietary Operations:** Grounded DI LLC is an active developer of this tech, having applied for trademarks like *DETERMINISTIC ARTIFICIAL INTELLIGENCE* and patent applications such as *CleanWaterWise* and other risk assessment frameworks. [🌐 Threads](#)
- **Real-World Focus:** DIAGI technology is actively targeted at high-risk domains where the AI's logical steps and data sources must be completely auditable and verifiable (such as medical-imaging tracking and hazard instability mapping). [🌐 LinkedIn · Mark Weinstein · 1](#)
